Connection Diagram

Operations

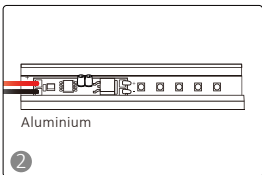

- LED strip is originally “off” and the led indicate light on the sensor PCB is “on” when the power is connected on. The light will be on when hand passing over the IR sensor switch within 10cm detection range, and will be off when hand passing over again.
- Hold the hand over the IR sensor more than 3s, to adjust the Led brightness dimming from 1% to 100%.
- The IR sensor will memorize the status of the Led brightness in 12V–24VDC.
- The IR sensor switch will turn on or off the led light with above repeatable steps.

Installation Steps

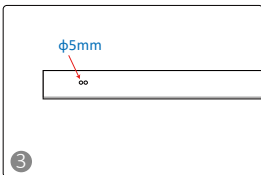

1

Connect wires to the input end and connect LED strip to the output end

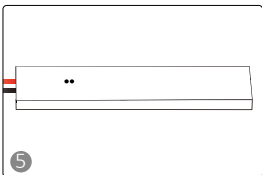

2

Install the sensor into the aluminium with double sided adhesive tape

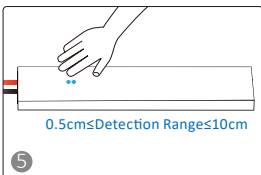

3

Drill 2 holes with a diameter of 5mm in PC cover.

5

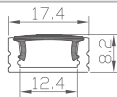

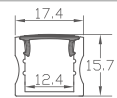

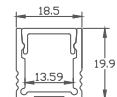

Click the PC cover to the aluminium

Working Status  
0.5cm≤Detection Range≤10cm
